                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ŏ
                                                                                                                                                                                                                                                                                      DROME (DNA-binding regulator of c-myc expression) and FUSE (far upstream element) binding protein (FBP) are synonymous. A FUSE which is required for maximal transcription of c-myc binds a factor (DROME or FBP). The activator cis-element is approx. 1500 bp 5' of the human c-myc promoter Pl. A full length FBP cDNA sequence was assembled from overlapping clones obtd. from cDNA libraries. Source RNAs were from undifferentiated HL60 cells, the B lymphoma cell line, BJAB, and PMA-MHA stimulated pooled human peripheral blood Lymphocytes (PBLS). A composite cDNA is given in AAQ68909 and the deduced polypeptide sequence, (67.5 kd mol. wt.) is given in AAR88813. The clone from an activated PBL cDNA library labeled "31-10" contains an FBP variant. The ORF comprised of bps 135-1991 of AAQ68909 with two exceptions. Clone 31-10 contains so inserted at posn. 238 which probably result from an intron which had not been spliced out. The inserted bps remain in the ORP. The 31-10 clone also deviates in that bps 1807-19522 are deleted. This deletion shifts cout of frame the stop codons which would terminate translation in the other clones. The AA sequence for the protein encoded by clone 31-10 can be found in AAR58816.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           16;

DROME (DNA-binding regulator of c-myc expression) and FUSE (far upstream element) binding protein (FBP) are synonymous. A FUSE which is required for maximal transcription of c-myc binds a factor (DROME or FBP). The activator cis-element is approx. 1500 bp 5' of the human c-myc promoter Pl. A full length FBP cDNA sequence was assembled from overlapping clones obtd.from cDNA libraries. Source RNAS were from undifferentiated HLGO cells, the B lymphona cell line, Iymphocytes (PBLS). A composite cDNA is given in AAQ68909 and the deduced polypeptide sequence. (6'5'5 kd mol. wt.) is given in AAR58813. Three clones from a BJAB cDNA library and three clones from an extivated human PBL cDNA library and three clones from the same BJAB library and two clones from the cativated lymphocyte library are lacking bps 316,317 and 318 cativated lymphocyte library are lacking bps 316,317 and 318 cativated lymphocyte library are lacking bps would encode a curiant protein lacking Ser 97 (see AAR58814).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      18;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Indels 121; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 161 QONPLQ---QPRGRRGLGQRGSSRQGSPGSVSKQKPCDLPLRLLVPTQFVGAIIGKEGAT 217

```
The present invention relates to single exon nucleic acid probes (SENP: see AA131315-AA57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                              Peptide #11352 encoded by probe for measuring placental gene expression

This sequence is the Ri paraneoplastic antigenic polypeptide. The Ri gene is associated with paraneoplastic opsoclonus (PO). The DNA sequence encoding this polypeptide was isolated via an Ri clone, R18, which was isolated from a cerebellar CDNA expression vector library derived from antiserum from a single patient with PO. Phagemid was excised from lambda-Ri8 using the helper phage R408, the resulting plasmid being designated pR18 (see also AAQ30801). PR18 was cloned and propagated in E. coli. PR18 encoded a protein of mol. Wt. 40 kD which is recognised by anti-Ri antiserum. This R18 fusion protein was used as an antigen to affinity purify antibody from the anti-Ri antiserum. The DNA sequence of PR18 was determined by the dideoxy method and an open reading frame encoding approx. 340 amino acids was identified. Regions of this sequence could be used to make PCR probes such that additional clones representing the full length Ri gene could be isolated.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          18-JUN-1999
          the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the polynucleotide which comprises a 1'-end sequence, where the polynucleotide comprises a 1'-end sequence, where the compination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers are useful for synthesising polynucleotides, in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length AHH13633 to AAHH3642 represent human cDNA sequences; and AAH13632 to AAH13632 to Febresent human amino acid sequences; and AAH13632 to AAH13632 to Febresent plumpan amino acid sequences; and AAH13632 to AAH13632 to Febresent plumpan amino acid sequences; and AAH13632 to AAH13632 to
                                                                                                                                                                                                                                                                                                                                                                                                             13;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

probable RNA-binding protein - Arabidopsis thaliana
N;Alternate names: protein T32M21.30
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 20-Apr-2000
C;Accession: T48439
R;Bevan, M.; Terryn, N.; Ardiles, W.; Buysshaert, C.; Dasseville, R.; De Clerck, R.; ewes, H.W.; Rudd, S.; Lemcke, K.; Mayer, K.F.X.
submitted to the Protein Sequence Database, March 2000
A;Reference number: 224487

Cypecies: Arabidopsis thallana (mouse-ear cress)
Cypecies: Williang (Mouse, Mouse)
Cypecies: Arabidopsis A.; Ecker, J.R.; Palm, C.J.; Federspiel, N.A.; Kaul, S.; White, O.; Alon Chin, C.W.; Chung, M.R.; Conn, L.; Conway, A.B.; Conway, A.R.; Creasy, T.H.; Dewar, ansen, N.F.; Hughes, B.; Huzar, L.
Nature 408, 816-820, 2000
Ayauthors: Hunter, J.L.; Jenkins, J.; Johnson-Hopson, C.; Khan, S.; Khaykin, E.; Kim, C.A.; Li, J.H.; Li, Y.; Lin, X.; Liu, S.X.; Lu, Z.A.; Luros, J.S.; Maiti, R.; Marzia Rizzo, M.; Roney, T.; Rowley, D.; Sakano, H.
Ayauthors: Salzaberg, S.L.; Schwartz, J.R.; Shinn, P.; Southwick, A.M.; Sun, H.; Tallo ker, M.; Wu, D.; Yu, G.; Fraser, C.M.; Venter, J.C.; Davis, R.W.
Aytile: Sequence and analysis of chromosome 1 of the plant Arabidopsis.
Ayacters: preliminary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  19;

C. SUBMITTED (APR-1996) to the EMBL/GenBank/DDBJ databases.

C. I- FUNCTION: MAY REGULATE RNA SPLICING OR METABOLISM IN A SPECIFIC SUBMITTED TO DEVELOPING NEURONS.

C. I- SUBCELLULAR LOCATION: NUCLEAR.

C. I- DISEASE: ANTIBODIES ARE SEEN AGAINST THIS ANTIGEN IN THE PATIENTS SUFFERING WITH PARANEOPLASTIC OPSOCLONUS-APAXIA (POA). POA IS A DISORDER IN WHICH ABNORMAL MOTOR CONTROL OF THE EYES, TRUNK AND LIMBS DEVELOP IN WOMEN WITH BASAT OR SMALL LUNG CANCER. POA PATIENTS SUFFER FROM OPSOCLONUS, A CHAOTIC EXE MOVEMENT DISORDER ATTRIBUTABLE TO A LACK OF INHIBITION OF BURST NEURONS IN THE BRAIN STEM. MYCLONARY, A DISORDER PATIENTING TO A FAILURE OF INHIBITORY CONTROL OVER SPINAL MOTOR NEURONS; AND TRUNCAL ATAXIA, CHAOTIC SEERABLE TO CEREBELLAR DYSFUNCTION; THERE ARE NO CORTICAL OR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      - I SUBCELLULAR LOCATION: LOGSELY BOUND IN THE NUCLEUS. MAY SHUTTLE BETWEEN THE NUCLEUS AND THE CYTOPLASM.

- I TISSUE SPECIFICITY: ABUNDANTLY EXPRESSED IN SKELETAL MUSCLE, THYMUS AND PERIPHERAL BLOOD LEUCCOYTES WHILE A LOWER EXPRESSION IS OBSERVED IN PROSTATE, SPLEEN, TESTIS, OVARY, SMALL INTESTINE, HEART, LIVER, ADRENAL AND THYROID GLANDS.

- I PTM: PHOSPHORYLATED. THE NON-PHOSPHORYLATED FORM(S) EXHIBITED THE STRONGEST POLY(RC)-BINDING ACTIVITY.

- I SIMILARITY: CONTAINS 3 KH DOMAINS.

- SEQUENCE OF REF.3.
